

Disinfect and protect surfaces
to keep your building clean

Don't Just Kill Germs. Prevent Them from Coming Back.

Certified Safety's new SaniShell Surface Protection System offers broad-spectrum antimicrobial surface cleaning, while also adding a protective antimicrobial film that **continues** to kill harmful viruses, bacteria, mold, mildew and other microbes long after it has been applied.

Our SaniShell System uses patented technology that is proven to **eliminate 99.9999% of all microbes** on both hard and porous surfaces. That's the highest level of disinfectant available.

Plus, testing by an EPA-approved lab shows that the clear, antimicrobial film continues to kill viruses, bacteria, mold, mildew and other microbes **for up to 90 days.**

Our Process

Here's how our process works:

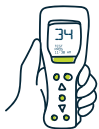

Step 1 - Clean & Prep Surface

Remove soils, biofilm and debris to disinfect surfaces.

Step 2 - Apply SaniShell Treatment

Apply antimicrobial coating with a sprayer or fogger.

Step 3 - Test & Verify Efficacy

Test surfaces to ensure microbial materials are neutralized.

Step 4 - Clean & Maintain

Follow proper cleaning procedures to ensure the protective barrier isn't removed.

Step 5 - Monitor & Report

Monthly testing to ensure surfaces are protected.

Benefits

Our SaniShell Surface Protection system uses a proprietary cleaning technology that is applied during our process. **Here's what makes this product different:**

- Kills existing viruses, bacteria, and germs on surfaces
- Invisible, protective barrier helps prevent germs on surfaces
- Effectively breaks down biofilm
- Continues to kill microbes for months
- Safe for use on any surface
- Non-toxic, non-allergenic, biodegradable and 100% sustainable
- Eliminates the hassle of repeated disinfection
- No silicas or additives that would cause build-up of product on surfaces
